DETAILED ACTION

This action is in response to amendments filed on June 1, 2010.

Allowable Subject Matter

Claims 1, 3 and 4 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach the invention as claimed, namely a variable displacement compressor having a discharge chamber, a suction chamber and a crank chamber, the compressor comprising: an electromagnetic displacement control valve disposed at a position in a discharge pressure supply passageway capable of communicating with said crank chamber from said discharge chamber; and a fixed orifice disposed at a position in a pressure relief passageway communicating with said suction chamber from said crank chamber; said electromagnetic displacement control valve having a valve body configured to open and close said discharge pressure supply passageway in response to an electromagnetic force from said electromagnetic displacement control valve to adjust a pressure in said crank chamber to control a piston stroke; wherein a part of said discharge pressure supply passageway and a part of said pressure relief passageway are formed as a common passageway communicating with an end of said crank chamber; and wherein a part of said common passageway is formed as a passageway through a bearing for a compressor main shaft; and wherein said common passageway is configured such that, during displacement control, as said valve body is moved from a closed position to an open

position, a gas flow occurs from said discharge chamber to said crank chamber through said common passageway, and when said valve body is in the closed position or the open position, a gas flow occurs from said crank chamber to said suction chamber through said common passageway.

It is noted by the examiner, and stated here for the record of prosecution, that the aspect of the instant invention determined to be novel and patentably distinct from the prior art is the common passageway configured such that, during displacement control, as said valve body is moved from a closed position to an open position, a gas flow occurs from said discharge chamber to said crank chamber through said common passageway, and when said valve body is in the closed position or the open position, a gas flow occurs from said crank chamber to said suction chamber through said common passageway.

This limitation in conjunction with the variable displacement compressor comprising an electromagnetic present a claim patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PATRICK HAMO whose telephone number is (571)272-3492. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Devon Kramer can be reached on 571-272-7118. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
